1. Introduction

TT-Scheduler is an intelligent, conflict-free timetable generator for schools and colleges. It uses Google's CP-SAT constraint solver (the same engine powering Google OR-Tools) to guarantee zero clashes across faculty, rooms, and batches - all in under 60 seconds.

Key capabilities at a glance

Feature	Description
CP-SAT Solver	8 hard constraints enforced - zero clash, guaranteed
7-Step Wizard	Guided onboarding for both School and College modes
Per-User Data	Your inputs and results are saved; pick up where you left off
History & Duplicate	Browse, restore, or duplicate any past timetable run
4 Views	Grid, Faculty, Student, and Analytics views
Excel Import/Export	Bulk-load faculty & courses from .xlsx; export full timetable
Google Sign-In	One-click login via Google OAuth 2.0 or email/password
AI Draft	Natural-language prompt to auto-populate wizard inputs
Secure Auth	JWT-based login with row-level database security

2. Getting Started

2.1 Creating an Account

1. Navigate to `tt-scheduler.vercel.app`.
2. Click "Get started free" or "Sign up" on the landing page.
3. Enter your email address and choose a strong password (minimum 8 characters).
4. Click Create Account.
5. You will be redirected to your Dashboard automatically.

Note: Each account's data is completely private - no other user can see your timetables or configuration.

2.2 Logging In

Login page - Email/Password and Google OAuth Sign-In options

TT-Scheduler supports two sign-in methods:

OPTION A - EMAIL & PASSWORD

1. Go to `tt-scheduler.vercel.app/login`.
2. Enter your registered email and password.
3. Click Log in.

OPTION B - GOOGLE SIGN-IN (OAUTH 2.0)

1. On the login page, click "Continue with Google".
2. Select your Google account from the browser popup.
3. Grant the requested permissions - TT-Scheduler only reads your name and email.
4. You are signed in and redirected to the Dashboard immediately.

Note: Google Sign-In creates an account automatically on first use. No password setup is required - just click "Continue with Google" every time.

Session restoration: When you log back in (by either method), TT-Scheduler automatically restores your last saved state (inputs, generated timetable, etc.) so you can continue exactly where you left off - even from a different device.

2.3 Dashboard Overview

After logging in you land on the Dashboard. This is your command centre.

Dashboard - stats cards and recent runs list

Element	Purpose
Stats cards	Quick summary: timetables generated, faculty, subjects, rooms
Recent timetables	Your last few generated schedules with restore buttons
+ New Timetable	Opens the workflow selector to start a new run
View History	Full history of every timetable you've ever generated

3. Choosing Your Workflow

Click "+ New Timetable" on the Dashboard. You will be prompted to select a workflow:

Workflow selector - School vs. College

Workflow	Best for	Wizard steps
School	K-12 schools, class-based schedules	Institution -> Classes -> Subjects -> Teachers -> Schedule -> Rooms -> Rules
College	Universities, elective-based scheduling	Institution -> Courses -> Faculty -> Rooms -> Schedule -> Constraints -> Generate

Click your workflow to begin. The 7-step wizard opens with a progress bar at the top and a Live Draft Preview panel on the right.

Tip: You can click any numbered step in the progress bar to jump back and make changes - your data is auto-saved at every step.

4. School Workflow - Step-by-Step

Step 1: Institution Setup

Goal: Name your school and set the academic year.

Field	Description	Example
Institution name	Your school's official name	Springfield High School
Academic year	Current year/session	2025-2026
Type	Select "School" (pre-selected)	-

Click Continue to Classes -> when done.

Step 2: Classes / Batches

Goal: Define the classes (sections/divisions) that need timetables.

- Click + Add class to add a row.
- For each class, enter:
 - Name - e.g., 10-A, Grade 9 Section B
 - Size - number of students (used for room capacity matching)
- Repeat for all classes.
- Use the delete icon to remove unwanted rows.

Tip: Add all sections of the same grade as separate entries (e.g., 10-A, 10-B, 10-C).

Click Continue to Subjects ->.

Step 3: Subjects

Goal: List every subject taught and how many periods per week each class gets.

Wizard Step 3 - Subjects form with Live Draft Preview sidebar

For each subject row:

Field	Description	Example
Name	Full subject name	Mathematics
Code	Short code (used internally by solver)	MATH
Periods/week	How many periods this subject runs per week	5
Target classes	Which classes this subject is for (multi-select)	10-A, 10-B

- Click + Add subject to add more rows.
- The Live Draft Preview panel on the right updates in real time, showing how full the schedule is and a miniature timetable grid.
- Use Import CSV to bulk-load a prepared spreadsheet (see Section 11).

Important: The Code must be unique for each subject. If two subjects share a code the solver will reject the input.

Click Continue to Teachers ->.

Step 4: Teachers

Goal: Add all teaching staff and assign which subjects they can teach.

For each teacher:

Field	Description	Example
Name	Teacher's full name	Dr. Jane Smith

Subjects	Subject codes this teacher is qualified to teach	MATH, PHY
----------	--	-----------

- Click + Add teacher to add rows.
- A teacher can teach multiple subjects - select all applicable codes from the dropdown.
- Use Import from Excel for bulk entry.

Warning: If a subject has no qualified teacher assigned, the solver will detect the conflict and the Auto-Resolve dialog will suggest adding one automatically.

Click Continue to Schedule ->.

Step 5: Schedule

Goal: Define when school happens - days, periods, timings, and lunch.

Setting	Description	Default
Working days	Check the days school runs	Mon-Fri
Start time	When the first period begins	08:00
Period duration	Length of each period in minutes	45 min
Periods per day	Total teaching periods per day	7
Lunch break	Toggle to enable a lunch gap	Off
Lunch after period	Which period lunch follows	4
Lunch duration	Length of the lunch gap in minutes	30 min

A live time grid preview updates as you type, showing the exact time each period starts and ends.

Note: Lunch is a gap in the schedule, not a teaching period. The total number of teaching periods remains as configured regardless of lunch.

Click Continue to Rooms ->.

Step 6: Rooms

Goal: Register all classrooms and special rooms.

For each room:

Field	Description	Example
Name	Room identifier	Room 101, Science Lab
Capacity	Maximum number of students	35

Tip: Add at least one room per class running simultaneously. If you have 3 classes with periods at the same time, you need at least 3 rooms.

Click Continue to Rules ->.

Step 7: Rules & Generate

Goal: Configure hard constraints and soft preferences, then generate the timetable.

HARD CONSTRAINTS (SCHOOL MODE - 4 ACTIVE)

These are always enforced. Toggle any constraint off to disable it:

#	Constraint	Rule
C01	FacultyOverlap	No teacher teaches two classes simultaneously
C02	RoomOverlap	No room hosts two classes at the same time
C03	BatchOverlap	No class attends two subjects simultaneously
C04	RoomCapacity	Room size must be class enrollment

Note: In School mode, constraints C05-C08 are not shown. Switch to College mode to unlock them.

CONFIGURABLE LIMITS

Setting	Description	Range
Max consecutive periods / teacher	Prevents a teacher from teaching back-to-back for too long	1-8
Max periods / teacher / day	Upper cap on how many periods a teacher works in a day	1-12

SOFT PREFERENCES

Soft preferences are optional hints - the solver tries to honour them but won't fail if it can't:

- Avoid day - e.g., Teacher X should not teach on Wednesdays
- Avoid period - e.g., Math should not be scheduled in period 7
- Prefer period - e.g., Science lab preferred in periods 5-6
- Spread subject - Ensure a subject is not bunched on one day
- Group on day - Keep a teacher's classes together on one day

Click + Add preference, choose the type, fill in the target and timing, and set a weight (1-5, where 5 is strongest).

GENERATING THE TIMETABLE

1. Review that all data looks correct in the Live Draft Preview sidebar.
2. Click Generate timetable.
3. A solving overlay appears showing real-time progress:
 - Validating problem -> Building model -> Running diagnostics -> CP-SAT search -> Extracting solution
4. Typically completes in under 60 seconds.

5. On success, you are automatically redirected to the Timetable Grid view.

5. College Workflow - Step-by-Step

The College workflow uses the same 7-step structure but is optimised for university scheduling with elective courses, multiple batches per department, and more advanced constraints.

College Step 1: Institution Setup

Same as School Step 1. Enter your university/college name and academic year.

College Step 2: Course Offerings

Goal: Define all courses being offered this semester.

For each course:

Field	Description	Example
Course name	Full course title	Data Structures & Algorithms
Course code	Unique identifier	CS301
Credits / Hours per week	Weekly contact hours	3
Type	Lecture, Lab, Tutorial	Lecture
Batch / Section	Which student group takes this	CSE-A, CSE-B
Enrollment	Number of students	60

Lab courses are automatically scheduled back-to-back (consecutive periods) by the solver - no extra configuration needed.

Use Import from Excel to upload a course list spreadsheet.

College Step 3: Faculty

Same structure as School Step 4, but with additional fields:

Field	Description
Max hours/week	Contract teaching limit (e.g., 16 hours)
Courses qualified	Assign one or more course codes

College Step 4: Rooms

Same as School Step 6. For colleges, distinguish between:

- Lecture halls (large capacity, projector)
- Computer labs (fixed workstations, specific capacity)
- Tutorial rooms (small group)

Tag rooms with features (lab, projector) so the solver can match them to course requirements.

College Step 5: Schedule

Same as School Step 5. Universities often have:

- 5 or 6 working days
- Periods starting from 08:00 or 09:00
- 50- or 55-minute periods
- A lunch break after period 4 or 5

College Step 6: Constraints

All 8 hard constraints are available in College mode:

#	Constraint	Rule
C01	FacultyOverlap	No faculty teaches two courses simultaneously
C02	RoomOverlap	No room hosts two classes simultaneously
C03	BatchOverlap	No batch attends two courses simultaneously
C04	RoomCapacity	Room must fit enrolled students
C05	CourseHours	Each course gets exactly its required weekly contact hours
C06	FacultyWorkload	Faculty hours stay within their contract maximum
C07	RoomFeatures	Rooms match course type (lab lab course, projector for lectures)
C08	LabConsecutive	Lab sessions are always consecutive (back-to-back)

College Step 7: Generate

Same generation flow as School Step 7. Click **Generate timetable**. The College solver handles significantly more variables (~1,428 variables, ~8,214 constraints) but still completes in under 60 seconds for typical institutions.

6. Viewing Your Timetable

After generation, four view modes are available from the top navigation:

6.1 Class / Grid View

The default view. Shows a weekly grid for each class/batch:

Day	P1 08:30-09:15	P2 09:15-10:00	P3 10:00-10:45	P4 10:45-11:30	P5 11:30-12:15	P6 12:15-13:00	P7 13:00-13:45	P8 13:45-14:30
MON	SCI Mrs. Iyer Room 103	—	—	—	—	MAT Mr. Verma Room 103	ENG Mrs. Sharma Room 103	CS Ms. Nair Room 102
TUE	ENG Mrs. Sharma Room 102	SST Mr. Das Room 103	CS Ms. Nair Room 103	—	ENG Mrs. Sharma Room 103	MAT Mr. Verma Room 101	SCI Mrs. Iyer Room 103	—
WED	SCI Mrs. Iyer Room 102	SST Mr. Das Room 103	PHY Mr. Singh Room 102	—	—	ENG Mrs. Sharma Room 101	CS Ms. Nair Room 101	MAT Mr. Verma Room 102
THU	PHY Mr. Singh Room 103	SST Mr. Das Room 102	—	—	ENG Mrs. Sharma Room 102	MAT Mr. Verma Room 101	SCI Mrs. Iyer Room 103	—
FRI	MAT Mr. Verma Room 103	SST Mr. Das Room 101	SCI Mrs. Iyer Room 103	—	ENG Mrs. Sharma Room 102	MAT Mr. Verma Room 103	—	—

Timetable Grid view - Class 10 weekly schedule with color-coded subjects

- Rows: Periods (with time labels, e.g. P1 08:30-09:15)
- Columns: Days of the week (Mon-Fri)
- Cells: Subject code, teacher name, room number
- Color coding: Each subject gets a unique color for quick visual scanning
- Status bar: Shows solver (CP-SAT), total assignments, solve time, and clash count (always 0)

Use the class tabs (Class 7, Class 8...) at the top to switch between classes/batches. Click Faculty / Student / Analytics tabs to switch views.

6.2 Faculty View

Shows each faculty member's weekly schedule:

Faculty View - Mr. Das's weekly SST schedule across all classes

- Click a teacher name chip at the top to switch between staff members
- Quickly identify a teacher's free periods (empty cells)
- The header shows: Periods/week . Subjects . Classes assigned
- Check if any teacher is overburdened before finalising

Each cell shows: Subject -> Class -> Room

6.3 Student View

Shows a student's personal timetable based on their enrolled courses/batch:

- Filter by batch/section
- Each row is a period; columns are days
- Empty cells are free periods

6.4 Analytics View

Provides utilisation metrics for the generated schedule:

Analytics View - teacher workload, subject distribution, room utilisation, and sessions per day

The Analytics page is split into four panels:

Panel	What it shows
Summary bar	Total assignments . Classes . Teachers . Subjects . Rooms . Solve time
Teacher Workload	Each teacher's total periods/week with a horizontal bar, plus which subjects and classes they cover
Subject Distribution	Periods per subject across all classes, with average periods/class
Room Utilisation	Sessions and occupancy % per room (colour-coded: green = healthy, red = heavily used)
Sessions per Day	How periods are distributed across Mon-Fri

7. Exporting Your Timetable

TT-Scheduler can export your complete timetable as a multi-sheet Excel workbook.

Excel export

Period	Monday	Tuesday	Wednesday	Thursday	Friday
P1 (08:30-09:15)	ENG Mrs. Sharma Room 101	MAT Mr. Verma Room 101	ENG Mrs. Sharma Room 102	CS Ms. Nair Room 6	SCI Mrs. Iyer Room 102
P2 (09:15-10:00)	SST Mr. Das Room 102	SST Mr. Das Room 102	MAT Mr. Verma Room 102	MAT Mr. Verma Room 101	ENG Mrs. Sharma Room 101
P3 (10:00-10:45)	-	SCI Mrs. Iyer Room 103	PHY Mr. Singh Room 101	-	SST Mr. Das Room 6
P4 (10:45-11:30)	-	-	-	-	-
P5 (11:30-12:15)	-	ENG Mrs. Sharma Room 103	-	-	CS Ms. Nair Room 6
P6 (12:15-13:00)	SCI Mrs. Iyer Room 102	PHY Mr. Singh Room 6	SST Mr. Das Room 102	-	-
P7 (13:00-13:45)	ENG Mrs. Sharma Room 102	MAT Mr. Verma Room 102	-	ENG Mrs. Sharma Room 101	MAT Mr. Verma Room 103
P8 (13:45-14:30)	MAT Mr. Verma Room 101	CS Ms. Nair Room 102	SCI Mrs. Iyer Room 103	SCI Mrs. Iyer Room 102	-

Exported Excel workbook - Class View sheet showing Class 10's full week

The exported .xlsx file contains three sheets accessible via tabs at the bottom:

Sheet	Contents
Class View	One table per class - periods as rows, days as columns. Each cell shows Subject . Teacher . Room
Faculty View	Each teacher's weekly schedule in the same grid format
Room View	Each room's occupancy across the week

How to export to Excel

1. From any timetable view, click Export (bottom-right or top-right toolbar).
2. Select "Download Excel".
3. The file downloads automatically as [InstitutionName]_Timetable.xlsx.
4. Open in Microsoft Excel, LibreOffice, or Google Sheets.

How to export PDFs

1. Click Export.

2. Select the view you want (Class Grid, Faculty, Student, Analytics).
3. Click "Download PDF" - the currently visible view is saved as a PDF file.

8. Timetable History & Duplicate Run

Every successfully generated timetable is automatically saved to your account.

Access it via:

- Dashboard -> "View History" button, or
- Sidebar -> History icon

Timetable History page - run cards with Duplicate and Load actions

History page features

Feature	How to use
Browse	Scroll through all past timetable runs, ordered newest first
Preview	Click any run card to see a compact grid preview inline
Load	Click "Load" to open that timetable's full result in the viewer
Duplicate Run	Click "Duplicate" on any run card to clone its full input configuration into a new session, ready to tweak and re-generate
Compare	Use "Compare" to open two timetables side by side

Delete	Click the Delete icon; confirm the prompt to permanently remove a snapshot
--------	--

Duplicate Run - detailed steps

The Duplicate Run feature is the fastest way to iterate on an existing timetable without starting from scratch:

1. Open History from the Dashboard or sidebar.
2. Find the run you want to use as a base and click "Duplicate".
3. TT-Scheduler clones the full input state - institution name, all classes, subjects, teachers, rooms, schedule settings, and soft preferences - into a new wizard session.
4. The wizard opens at Step 1 with all data pre-filled.
5. Make whatever changes you need (add a teacher, change periods, adjust constraints).
6. Click Generate in Step 7 to produce a new timetable.
7. Both the original and the new run are saved independently in History.

Restore loads the timetable's full input state as well (teachers, subjects, rooms, schedule settings). This lets you tweak inputs and re-generate from a historical baseline.

9. Auto-Resolve (AI Fix)

When the solver detects constraint violations or can't place all sessions, it shows an Auto-Resolve dialog instead of just an error.

What triggers Auto-Resolve?

- A subject has no qualified teacher assigned
- A teacher's subject codes are invalid/mismatched
- The schedule is oversubscribed (too many periods requested vs. available slots)
- A teacher's capacity is exceeded (too many sessions, not enough teachers)
- A class has no suitable room

How to use it

Auto Resolve modal - 3 fixes proposed: extra teachers for ENG and MAT, plus a room added

1. The Auto Resolve modal appears after generation, showing the number of fixes proposed.
2. Each fix is listed with a checkmark - e.g.:
 - "Added 1 extra teacher(s) for 'ENG'"
 - "Added 1 extra teacher(s) for 'MAT'"
 - "Added 1 room(s) to match class count"
3. Click "Accept & Apply All" to apply every fix and immediately re-run the solver.
4. Click Cancel to dismiss and manually correct the inputs yourself in earlier steps.

After a successful re-generation, a Rename prompt may appear if placeholder teachers or rooms were added - you can give them real names before the timetable is finalised.

Tip: If you only want to fix some issues manually, click Cancel, go back to the relevant step, make your changes, and click Generate again.

10. AI Draft - Natural-Language Setup

The AI Draft feature lets you describe your institution in plain English and have TT-Scheduler automatically populate the wizard inputs for you - no manual data entry required.

AI draft ✖

Describe in plain English — we'll fill the wizard

Describe your institution's timetable setup

A high school with 3 classes (10A, 10B, 10C), 6 subjects (Math, English, Science, History, PE, Art), and 8 teachers. Mon-Fri, 7 periods per day starting at 8 AM.

TRY AN EXAMPLE

A high school with 3 classes (10A, 10B, 10C), 6 subjects (Math, English, Science, History, PE, Art), and 8 teachers. Mon-Fri, 7 periods per day starting at 8 AM.

A college with 2 departments: CS (4 courses) and Math (3 courses), 10 faculty members, 5 classrooms and 2 labs. 6 periods per day.

Primary school with 4 sections for Grade 5. Subjects: English, Hindi, Math, Science, Social Studies, Art. 6 periods/day, Mon-Sat.

✦ Generate draft Cancel

Powered by Claude Haiku - Results are fully editable in the wizard

AI Draft modal - natural-language prompt interface powered by Claude Haiku

How AI Draft works

1. From the Dashboard or the workflow selector, click "AI Draft" (or the sparkle icon).
2. The AI Draft modal opens with a text input area.
3. Type a free-form description of your institution. Include as much detail as you have:

"My school has 4 classes: Grade 10-A, 10-B, 11-A, 11-B. Each class has 35 students. Subjects are Mathematics (5 periods/week), English (4), Science (4), History (3), and PE (2). Teachers: Mr. Kumar teaches Math and Science; Ms. Patel teaches English and History; Mr. Roy teaches PE. School runs Mon-Fri, 8:00 AM start, 45-minute periods, 7 periods per day, lunch after period 4."

4. Click "Generate Draft". The AI (powered by Claude Haiku) interprets your description and fills in:
 - Institution name and type
 - Classes/batches with enrollment
 - All subjects with periods-per-week and class assignments
 - Teachers with their qualified subjects
 - Schedule settings (days, start time, period length, lunch)
5. Review the pre-filled wizard - all steps will be populated.
6. Correct any field the AI may have misunderstood, then proceed through the wizard normally.

Tips for best results

What to include	Example
Number of classes and names	"3 sections: CSE-A, CSE-B, CSE-C"
Subjects with weekly frequency	"Data Structures - 3 hours/week"
Teacher-subject assignments	"Dr. Rao teaches DS and Algorithms"
Schedule details	"9:00 AM start, 50-minute periods, Mon-Sat"
Special rooms	"1 computer lab (30 seats), 2 lecture halls (60 seats)"

Note: AI Draft is an assistant, not a replacement for review. Always verify the populated inputs before generating, especially subject codes and teacher assignments.

11. Constraint Reference

Hard Constraints

These are enforced absolutely - if violated, the solution is rejected.

Code	Name	Condition for violation
C01	FacultyOverlap	Two lessons with the same teacher scheduled at the same time
C02	RoomOverlap	Two lessons in the same room at the same time
C03	BatchOverlap	A class/batch has two subjects at the same time
C04	RoomCapacity	Room capacity Tip: Use the downloaded template rather than creating a spreadsheet from scratch - it includes column headers in exactly the right format and an example row.

13. Troubleshooting

"No valid subjects found"

Cause: Step 3 (Subjects) was skipped or all subject rows are empty.

Fix: Go back to Step 3 and add at least one subject with a name and code.

"No valid classes found"

Cause: Step 2 (Classes) was skipped or all class rows are empty.

Fix: Go back to Step 2 and add at least one class.

"Cannot reach backend"

Cause: The backend server is not responding (likely a cold start on Render's free tier).

Fix: Wait 30-60 seconds and try again. Render free instances sleep after inactivity and need time to wake up.

"Solver took too long"

Cause: The problem is too large or too constrained for the solver to find a solution within the timeout.

Fix options:

- Reduce periods per week for some subjects.
 - Add more rooms.
 - Add more teachers.
 - Reduce the number of soft preferences.
 - Use the Auto-Resolve suggestions.
-

Timetable generated but some sessions are missing

Cause: The solver couldn't place every session (reported as "unplaced sessions" in Analytics).

Fix: Check Analytics View -> Unplaced sessions. Common causes: not enough rooms, teacher overloaded, too many periods per week relative to available slots.

"INFEASIBLE" result

Cause: The constraints make it mathematically impossible to produce any valid timetable.

Fix: Review Analytics for the most violated constraint, then loosen it - e.g., reduce required periods, add more rooms, or add more teachers.

Login not working

Fix: Ensure you are using the correct email. If you forgot your password, use the "Forgot password" link on the login page (Supabase sends a reset email).

14. FAQ

Q: Can I use TT-Scheduler for both a school and a college?

A: Yes. You can create separate timetable runs - one using the School workflow and another using the College workflow - all under the same account.

Q: Is my data safe?

A: Yes. All data is stored in Supabase with Row-Level Security (RLS) enabled - only your account can read or write your data. Authentication uses industry-standard JWT tokens.

Q: How many classes/teachers/subjects can I add?

A: There is no hard UI limit. However, very large problems (100+ classes, 200+ teachers) may increase solve time. For best results, keep the number of periods per week reasonable and ensure teacher capacity matches demand.

Q: Can I edit a timetable after it's generated?

A: TT-Scheduler does not support manual cell editing yet. To change the schedule, modify your inputs (teachers, subjects, rooms, rules) and click Generate again. Your new timetable is saved alongside the previous one in History.

Q: What happens if I close the browser mid-wizard?

A: Your inputs are auto-saved at every step. When you log back in, TT-Scheduler restores your session automatically - you won't lose any data.

Q: Can I download my timetable for offline use?

A: Yes. Use the Export feature to download an Excel (.xlsx) file or PDFs. These can be shared, printed, or opened offline.

Q: What's the difference between hard constraints and soft preferences?

A: Hard constraints are never violated - if they can't be satisfied, the solver fails and reports a conflict. Soft preferences are best-effort - the solver tries to honour them but will still produce a schedule even if it can't.

Q: Can multiple users collaborate on the same timetable?

A: Not currently - each account is independent. Sharing a timetable requires exporting it (Excel/PDF) and sending the file.

For technical issues or feature requests, open an issue at the GitHub repository or contact the development team.
